

## **Vaccine Visits**

These are nurse visits for administration of vaccines. These are scheduled routinely throughout the week as well on Saturday mornings. We schedule 10 minutes per visit. You will not routinely see a physician during these visits.

The nurse will take the temperature of your child prior to giving the vaccines. We do not vaccinate if your child's temperature is greater than 101.5 F.

Please bring your child's medical record book so we can update it with the appropriate vaccines. Also, knowing what vaccines your child is due for is recommended and will make the visit more time efficient.

We strongly recommend the seasonal flu vaccine to keep your family from suffering the misery and subsequent complications of influenza.
